

**99% of rainforest  
remains intact  
thanks to you**

Here's what we achieved in 2024 and what we will deliver in 2025.

Sololo, Papua New Guinea.

# The problem

Deforestation makes climate change worse, and recovery much harder.

---

Deforestation accounts for 20% of global greenhouse gas emissions.

Source: [here](#)

Rosa, part of Amarno. Keeping her culture alive by making traditional jewellery, whilst also generating an income for her community.

# The solution

Protect rainforest, back people,  
fight the climate crisis.

## Why?

The climate crisis is made worse by deforestation

+

A stable and liveable planet requires rainforests

## How we help

We invest in local people who live in the rainforest via:

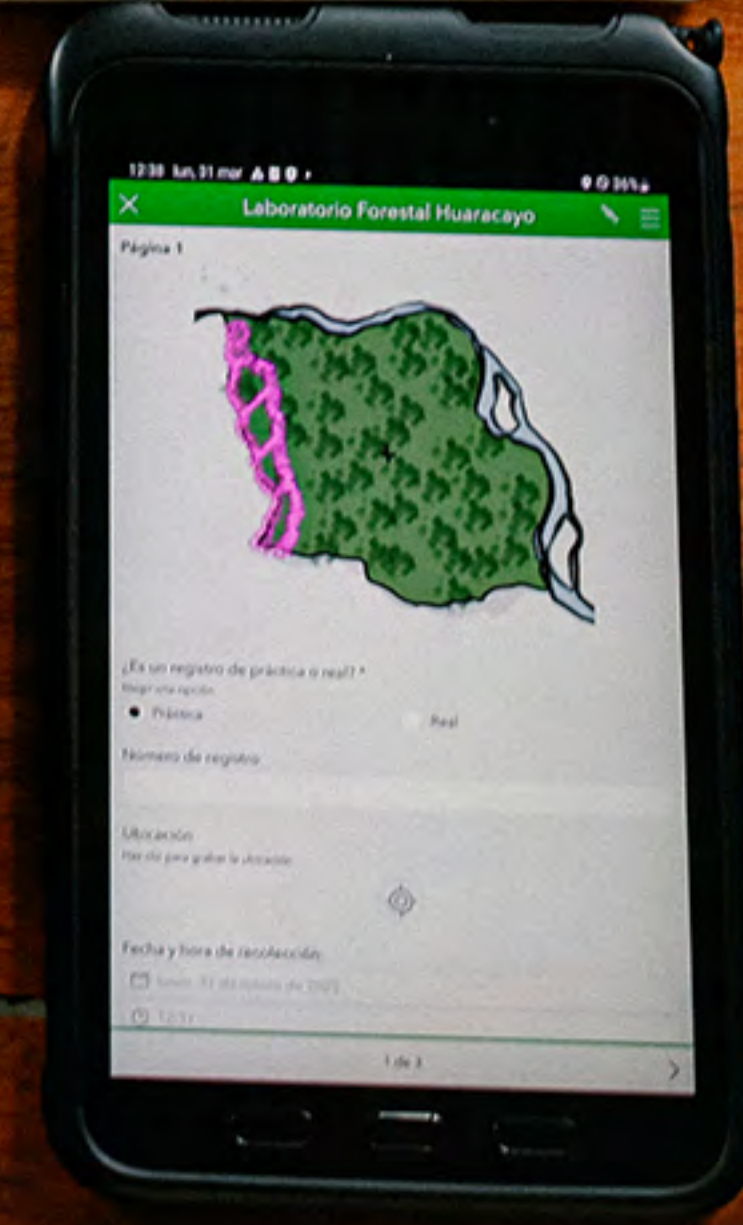

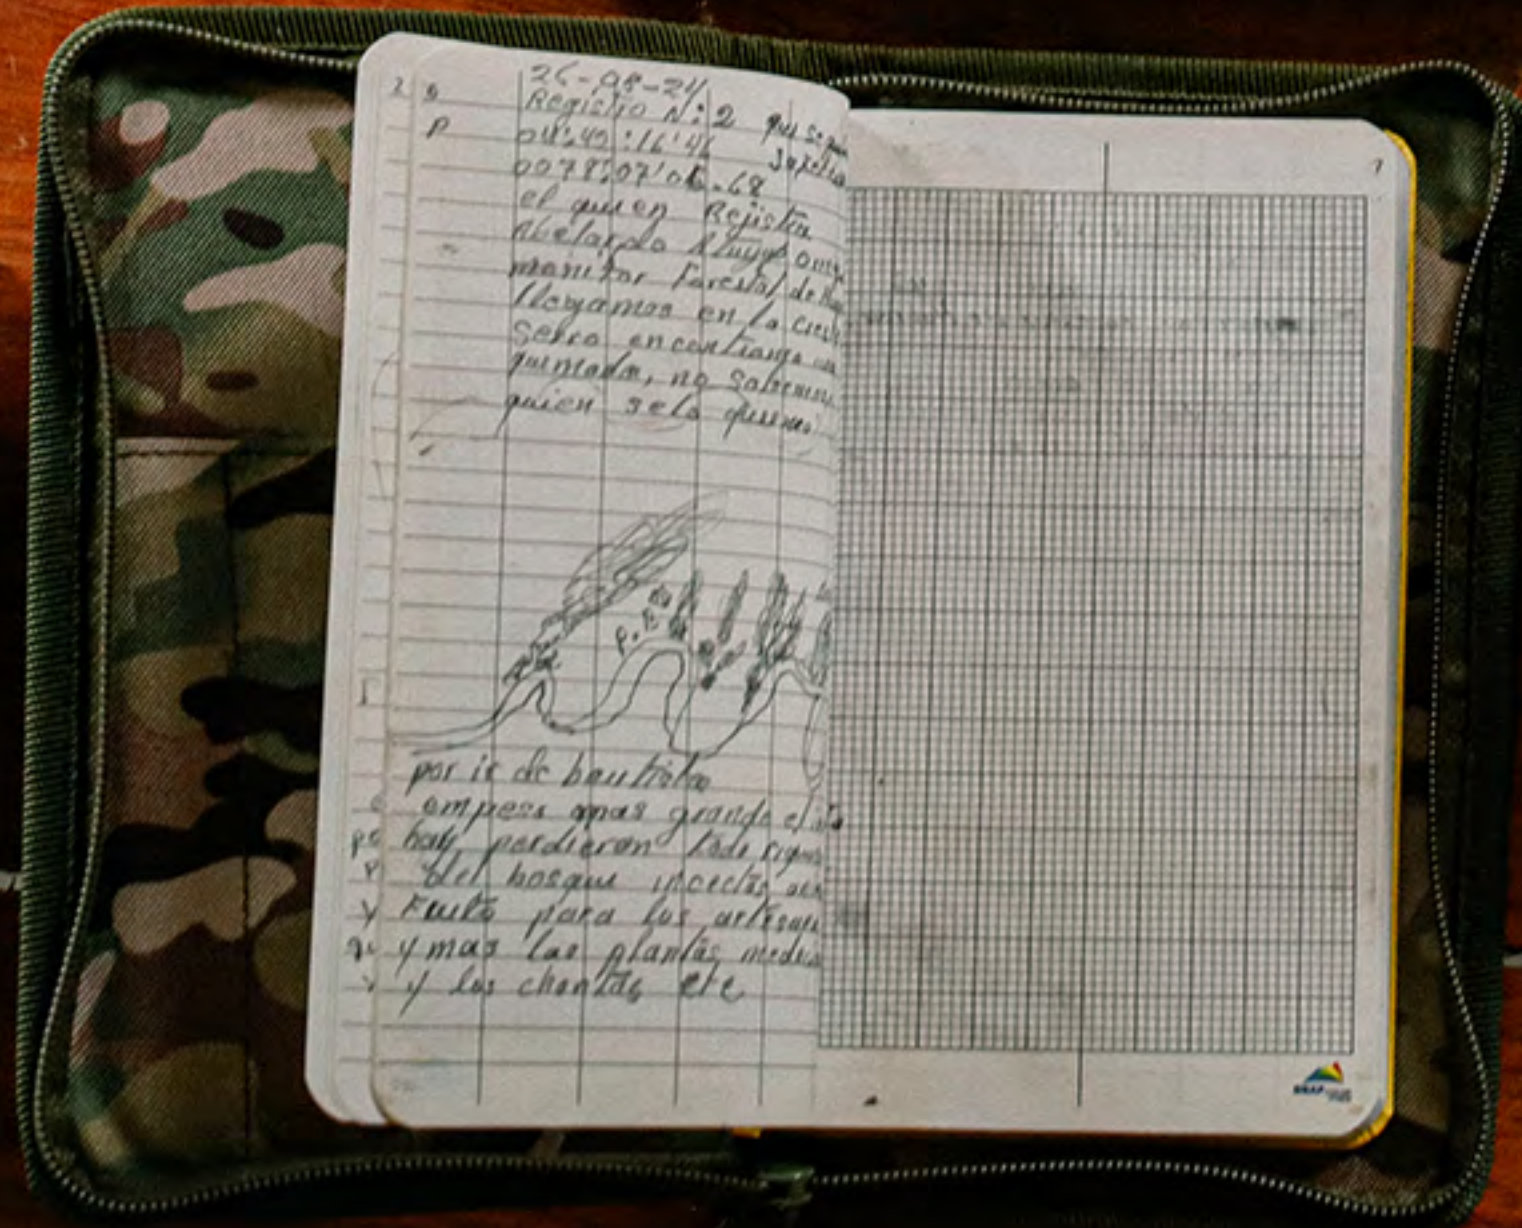

-  Cash transfers
-  Rainforest data
-  Stronger local economies

= less deforestation and rainforest is protected

## The goal

The climate crisis is over

Equipment used by forest monitors

# Your support = effective and ethical rainforest protection

This community in Papua New Guinea said no to loggers, saving a rainforest twice the size of central London, all because of your support.

Huayruro seeds, Peruvian Amazon.  
Known as the seeds for warriors.

# The headlines

99% of rainforest is intact where we work.  
So far, 58,000 Indigenous peoples have been supported by you, meaning they can:

Protect 2.1 million acres of forest for future generations. That's 263 times the size of central London.

Keep half a billion tonnes of carbon where it belongs. That's two-thirds of the UK population's carbon use for a whole year.

Ensure 380 million tropical trees are still standing. Yes, we counted them all.

And there is so much more to come. ([Jump to page 15](#) to see what's next for Cool Earth).

# We achieve this in three ways

## 【🐷 Cash】

You donated over £4.2 million in 2024 to support rainforest communities around the world. Direct from your pocket to theirs, no strings attached.

---

### Why does it work?

Financial stability reduces the risk of communities selling their forest to generate an income.

### In 2024:

- We expanded our UN-backed basic income pilot to more participants and clocked over a year's worth of data to learn from for future pilots.
- Communities reported spending funds on education, health emergencies, water storage and improvements to infrastructure such as homes and tracks.
- We ran ten workshops to increase financial literacy in communities.

### Impact on forest and climate:

Less deforestation means we're more likely to end the climate crisis.

We've just opened a brand new Rainforest Lab in Papua New Guinea. They're hubs for the latest tech so communities can monitor their forests.

---

#### Why does it work?

Instant access to satellite data means communities can tackle threats such as wildfires, flooding and deforestation faster than ever before.

#### In 2024:

- 40,888 acres of forest were monitored by our Rainforest Labs in Peru and Papua New Guinea.
- 52 forest alerts were investigated.
- We saw a 20% reduction in frequency and size of wildfires thanks to our early warning system, SAT CARE in partnership with PAAMARI.
- We celebrated indirect benefits of the labs such as improved computer literacy and Wi-Fi for whole communities.

#### Impact on forest and climate:

Faster responses mean less rainforest is destroyed.

We work with Indigenous entrepreneurs to create sustainable businesses, from chocolate to jewellery. Think business plans, finance training and branding.

#### Why does it work?

When Indigenous-led brands get a larger profile, they sell more and put that cash straight back into their rainforest communities.

#### In 2024:

- Eight local businesses thrived.
- They generated £491,000 in sales, all reinvested back into rainforest communities.
- We saw increased confidence, more autonomy and improved economic stability.

#### Impact on forest and climate:

As communities generate more income, they are able to resist offers from miners and loggers. This keeps rainforests standing.

# The climate crisis

It's not going to get any better unless we fight it.

## Peru

- Drought in dry seasons
- Increased wildfires
- Rising temperatures
- Risk of extreme temperatures
- Increased flooding in wet seasons
- Reduced water supply

## Cameroon

- Natural disasters (erosion and landslides)
- Droughts
- Reduced water supply

## Papua New Guinea

- Sea levels rising
- Intensifying cyclones
- Drought in dry seasons
- Increased flooding in wet season
- Reduced water supply

Rainforest community, Papua New Guinea

# What does the future of Cool Earth look like?

Well, for every £ you donate in 2025 we will:

## Colombia **NEW FOR 2025**

- Explore a brand new basic income pilot in Colombia in partnership with [Equal Right](#).

## Peru

- Collaborate with 25 Indigenous communities.
- Protect 264,804ha forest and store 111,245,000 tonnes of carbon.
- Put more forest data in the hands of Indigenous people with our two Rainforest Labs.
- Continue to slow wildfires alongside Indigenous partners CARE.
- Explore how we scale the basic income pilot in Peru and produce the evaluation of the pilot so others can learn from our approach.

## UK, US & Europe

- Grow our income so we can expand our work and protect even more rainforest.
- Advocate for global climate finance to be given directly to people living in rainforest.

## Ghana **NEW FOR 2025**

- Develop a brand new Rainforest Lab in Ghana to help protect a further 7,000ha of rainforest.

## Cameroon

- Collaborate with 20 rainforest communities via our partnership with CCREAD.
- Protect 488,959ha of forest and store 170,000,000 tonnes of carbon.
- Complete rainforest threat analysis in order to ensure our work protects forest in the ways most needed.

## Papua New Guinea

- Collaborate with five rainforest communities.
- Protect 59,674ha forest and store 75,577,000 tonnes of carbon.
- Put forest data in the hands of communities with our brand new Rainforest Lab.
- Continue to strengthen communities' access to resources, including clean water and crops.

**Your donations back  
people, protect  
rainforest and fight  
the climate crisis.**
